Application Integration Modules (AIM)©

Overview:

In order to keep up with information between several main stream application platforms in real-time, the team at Virtual Vision Technologies (VVT) has created the Application Integration Modules or (AIM) as we like to call our new skill set training's. As technology advances and the need for information constantly expands, (AIM) demonstrates how to receive, view and edit important data by using key cross platform method's.

Many visually impaired professionals and others, have historically been left in the dark when it comes to receiving information on-the-go, however, using cloud based and mobile accessible technology, (AIM) demonstrates and deliver's training on today's essential applications from home, work and on mobile devices in order to level the workplace and educational playing fields.

By using accessible apps and software, the visually impaired professional, student or technology enthusiast can accomplish the following in real-time, from anywhere through (AIM):

- Create, send, respond and interact with Microsoft Outlook business or personal emails
 - View, send and receive email attachments
 - Create and respond to meetings and appointments
 - View and interact with the Outlook calendar
- Interface with other essential Microsoft Office based applications (mobile) to review, edit and share important information with your team
 - Microsoft Excel
 - Microsoft Word
 - Microsoft PowerPoint
- Store any type of media and share with colleagues with Drop Box
 - View, edit and update reports on the-go
 - Open any type of (PC) or mobile application version of Microsoft Office
 - View information on or off line
- Read and store important text without assistance using the (KNFB Reader)
- Highlighting with braille and speech output
 - Capture text imbedded within images *Logo's *Graphical Display's
 - Import important text to *Drop Box and *Cloud storage
 - Read restaurant menus, pamphlets and other text items instantly
